## **Advances in the Computer Simulations of Liquid Crystals**

November 15th, 2018 - The field of computer simulations of anisotropic fluids is interdisciplinary and is evolving very rapidly The present volume covers a variety of techniques and model systems from lattices to hard particle and Gay Berne to atomistic for thermotropics lyotropics and some biologically interesting liquid crystals

## **Advances in the Computer Simulations of Liquid Crystals**

November 5th, 2018 - Computer simulations provide an essential set of tools for understanding the macroscopic properties of liquid crystals and of their phase transitions in terms of molecular models. While simulations of liquid crystals are based on the same general Monte Carlo and molecular dynamics techniques as

## **Crystals Special Issue Advances in Computer Simulation**

November 8th, 2018 - This special issue discusses recent advances in computer simulation studies of crystal growth. Crystal growth is a key to innovation in science and technology. Owing to recent progress in computer performance, computer simulation studies of crystal growth have become increasingly important.

## **Computer simulation studies of nematic liquid crystal**

November 5th, 2018 - The liquid crystal tactoids were studied using canonical Monte Carlo computer simulations. Each cycle consisted of  $N_m$  trials where  $N_m$  is the number of molecules in the system. Each trial was either a) a move to a neighbouring site, b) a move to a random site, c) a change of orientation, or a combination of a and c, or b and c.

## **Computer Simulation and Molecular Design of Model Liquid**

November 8th, 2018 - PDF. In this chapter we discuss some of the problems and peculiarities of the computer simulation of liquid crystals and we briefly summarize the state of the art in the field.
